

HOFA 4U ProjectTime

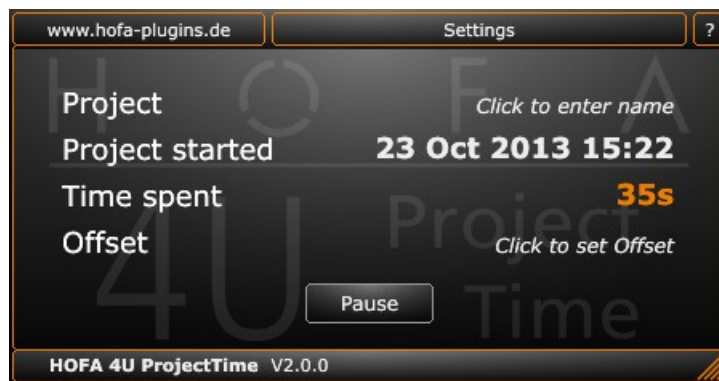

Overview

The HOFA 4U ProjectTime allows to measure the time spent in a project and also create a log. To do so, the plugin simply needs to be added in an arbitrary insert slot of the project.

Besides the automatically created start time the project name and an offset can be set. The offset allows to compensate the time if the plugin was loaded some time after working on the project was started (positive offsets) or if the plugin wasn't paused during a break (negative offset).

To change the project name or offset simply click them.

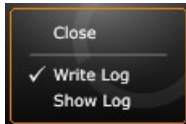

Pause

ProjectTime can be paused during a break where the sequencer or project shouldn't be closed.

Log

In the Settings menu, writing the log can be activated or deactivated and the log can be shown.

“Show Log” is only visible if logging is activated. If the log is deactivated and activated again later all logged data before reactivating the log is lost.

The log shows all time in a table and also allows commenting each entry.

HOFA 4U ProjectTime - Log

Project: My Project Name
Project started: 23 Oct 2013 15:51
Time spent: 4h 57m 20s; Offset: 10m

Start Time	End Time	Duration	Comment
22 Oct 2013 12:05	22 Oct 2013 12:45	40m	Setting up project; 10 min Offset
22 Oct 2013 14:36	22 Oct 2013 15:48	1h 12m 0s	Edits
22 Oct 2013 17:26	22 Oct 2013 18:34	1h 8m 0s	Mix
22 Oct 2013 7:46	22 Oct 2013 9:26	1h 40m 0s	Mix
23 Oct 2013 16:04		- Running -	

“Copy to Clipboard” creates a text representation of the log in the clipboard.
